## ESM Shipment (XML)

### Guidelines

Use this message for any type of shipment (i.e. sale, transfer, or return). This message can contain optional commissioning and aggregation data, in addition to the required shipping data.

- When product changes ownership from an MAH, or a CMO or 3PL acting on behalf of an MAH, to another entity, an outbound shipment is generated and the serial numbers are put into a **shipped** state.
- When product is moving between locations (i.e. not a change of ownership) working on behalf of an MAH, an inbound shipment is generated and the serial numbers are put into a **pending receipt** state.

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

**Message Type:** SOM\_ESM\_SHIPMENT

**Info Exchange Display Name:** ESM Shipment

❗ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

One serial number is included per received container (or item if shipping loose items). This is typically a pallet or case serial number. <sup>2</sup>                                                                                                                                                                                                                       |

## ESM Shipment (EPCIS v1.2)

### Guidelines

Use this message for any type of shipment (i.e. sale, transfer, or return). This message can contain optional commissioning and aggregation data, in addition to the required shipping data.

- When product changes ownership from an MAH, or a CMO or 3PL acting on behalf of an MAH, to another entity, an outbound shipment is generated and the serial numbers are put into a **shipped** state.
- When product is moving between locations (i.e. not a change of ownership) working on behalf of an MAH, an inbound shipment is generated and the serial numbers are put into a **pending receipt** state.

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

**Message Type:**SOM\_ESM\_SHIPMENT

**Info Exchange Display Name:** ESM Shipment

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

⚠ NTINs *must* follow the [GS1 Guidance](#) standards as found on the GS1 website.

- Ex: urn:epc:id:sgtin:415001647778.0.100000000022
- Format: urn:epc:id:sgtin:[company prefix].[indicator digit][item ref].[serial number]

Information regarding NTINs cannot be exchanged with trade partners unless the specific format outlined above is followed. If using an NTIN without following this format, an outbound error occurs when passing data from TraceLink to a trade partner.

# Void shipment APIs

## Why do I use these messages?

Use these messages to communicate that a delivery is cancelled or corrected. These messages use the delivery number to identify the shipment to be voided and provide a reason for the change in status.

## Which report do these messages generate?

These messages generate the [251 - Refusal Sender](#) report in the Russia Compliance application if their contents meet the report conditions.

## Void Shipment (XML)

### Guidelines

**Message Type:** SOM\_VOID\_SHIPMENT

**Info Exchange Display Name:** Void Shipment

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

ⓘ Only send top-level container serial numbers for this message.

| Data Element          | Occurs Length | Type | Description                                      |
|-----------------------|---------------|------|--------------------------------------------------|
| som:SOMVoidShipment   | 1...1<br>-    | -    | <b>Required.</b> Root element of message.        |
| som:ControlFileHeader | 1...1<br>-    | -    | <b>Required.</b> XML file control header record. |

## Void Shipment (SOAP)

### Void Shipment Request

## Guidelines

❗ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

The following data is sent in the request to TraceLink:

| Data Element     |  |                  |            |                 | Occurs<br>Length | Type   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

# Customs clearance

# Customs clearance APIs

## Why do I use these messages?

Use these messages to record that a customs agency has approved items for import to Russia and provide supporting documentation.

## Which report do these messages generate?

These messages generate the [335 - FTS Data](#) report in the Russia Compliance application if their contents meet the report conditions.

## Country Clearance (XML)

### Guidelines

**Message Type:** SOM\_COUNTRY\_CLEARANCE

**Info Exchange Display Name:** Country Clearance

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

**Receipt**

# Receipt APIs

## Why do I use these messages?

Use the following messages to receive any type delivery (i.e. purchase, return, or transfer) and move the serial numbers from the delivery into inventory.

 Administrators for companies that Own Serialized Operations Manager can configure the app to automatically receive transfer shipments without submitting a receipt message. See the *Administration Online Help* for more information.

## Which reports do these messages generate?

These messages generate one of the following reports in the Russia Compliance application if their contents meet the report conditions:

- [701 - Accept](#) (for [603 - Move Owner Notification](#)) – Captures approval of items transferred from the manufacturing CMO to the MAH after the items have been part of a product release.
- [701 - Accept](#) (for [610 - Move Return Notification](#)) – Captures approval of items returned from the Wholesale Distributor to the MAH for the suspended products.
- [701 - Accept](#) (for [613 - Foreign Shipment Notification](#)) – Captures approval of items in a non-consignment direct order sent to the Russia Compliance Owner.
- [332 - Foreign Import](#) – Captures the receipt of serialized items imported to Russia as a non-consignment reverse order.
- [333 - Foreign Import Owner](#) – Captures the receipt of serialized items imported to Russia as an own funds or consignment order.
- [341 - Receive Importer](#) – Captures information about serialized items that are received at a warehouse in Russia after being cleared by customs for distribution.
- [701 - Accept](#) (for [601 - Move Order Notification](#)) – Captures approval of items purchased from or returned to a seller in Russia.

## Receipt (XML)

### Guidelines

This message allows shipment data to be received in two parts (i.e. shipment information and serial numbers). For example, shipment information can originate from an ERP system and serial numbers from WMS system or 3PL partner.

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

**Message Type:** SOM\_RECEIPT

**Info Exchange Display Name:** Shipment Receipt

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

Please contact Support if this error is encountered. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                   |

# Receipt (EPCIS v1.2)

## Guidelines

To receive both shipment information and serial numbers in this message, all shipment data must originate from the same system. If shipment information and serial numbers must be received separately (e.g. because shipment information is managed in a separate ERP system), use a combination of this message and the Receipt (XML) message (i.e. submit the Receipt (XML) message containing the shipment information and set the DeliveryComplete flag to "false", and then submit the Receipt (EPCIS v1.2) message containing the Delivery Number and list of EPCs.

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

**Message Type:** SOM\_RECEIPT

**Info Exchange Display Name:** Shipment Receipt

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

ⓘ NTINs *must* follow the [GS1 Guidance](#) standards as found on the GS1 website.

- Ex: urn:epc:id:sgtin:415001647778.0.1000000000022
- Format: urn:epc:id:sgtin:[company prefix].[indicator digit].[item ref].[serial number]

Information regarding NTINs cannot be exchanged with trade partners unless the specific format outlined above is followed. If using an NTIN without following this format, an outbound error occurs when passing data from TraceLink to a trade partner.

## Receipt Event (EPCIS v1.2)

### Guidelines

Serialized Operations Manager Owners and Partners use this message to create receipts for deliveries sent from trade partners. This message supports the required Object Event Receiving event and the optional Aggregation Event.

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

#### Message Types:

- SOM\_RECEIPT\_EVENT
- SOM\_RECEIPT\_EVENT\_IB

#### Info Exchange Display Name: Receipt Event

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

⚠ NTINs *must* follow the [GS1 Guidance](#) standards as found on the GS1 website.

- Ex: urn:epc:id:sgtin:415001647778.0.100000000022
- Format: urn:epc:id:sgtin:[company prefix].[indicator digit].[item ref].[serial number]

Information regarding NTINs cannot be exchanged with trade partners unless the specific format outlined above is followed. If using an NTIN without following this format, an outbound error occurs when passing data from TraceLink to a trade partner.

| Data Element        | Occurs Length | Type     | Description                                                                                                                                                                                                                                                                                                     |
|---------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| epcis:EPCISDocument | 1...1<br>-    | -        | <b>Required.</b> EPCIS message root element.                                                                                                                                                                                                                                                                    |
| @schemaVersion      | 1...1<br>0/*  | Decimal  | <b>Required.</b> The version of the EPCIS schema used to populate the EPCIS document elements. Must equal <a href="#">1.2</a> . <sup>1</sup>                                                                                                                                                                    |
| @creationDate       | 1...1<br>1/*  | DateTime | <b>Required.</b> The date and time of the SBDH document's creation. GMT create date and time for the EPCIS message. The system expects the <a href="#">Z</a> to be appended; however, if it is not included, the system assumes that the time is GMT and therefore appends the <a href="#">Z</a> . <sup>2</sup> |

|              |  | som:Aggregation      |                   | 0...1<br>-    | -        | <p>Communicates new aggregations created by the warehouse that are included in the shipment. The <b>PickedItems</b> includes the top-level container serial numbers and loose items. If the warehouse creates a new aggregation (e.g. a new pallet or mixed case), the new aggregation hierarchies are communicated in the <b>cmn:Aggregation</b> element group.</p> <p>If an existing case ships, the case must be scanned and the case hierarchy is not provided. If a new mixed case is created, the hierarchy for that new case is communicated.</p> <p>This enables the distribution warehouse to locally manage changes to aggregation hierarchies. The warehouse communicates the new aggregation hierarchies of the shipped goods at the time of shipment without having to send disaggregation and aggregation events. TraceLink implicitly disaggregates and aggregates operations to achieve the end state hierarchy prior to processing the shipment. TraceLink also auto-commissions the SSCC numbers for new cases and pallets when these SSCC numbers are not yet commissioned.</p> |

# ESM Receipt (EPCIS v1.2)

## Guidelines

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

**Message Type:** SOM\_ESM\_RECEIPT

**Info Exchange Display Name:** ESM Receipt

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

⚠ NTINs *must* follow the [GS1 Guidance](#) standards as found on the GS1 website.

- Ex: urn:epc:id:sgtin:415001647778.0.100000000022
- Format: urn:epc:id:sgtin:[company prefix].[indicator digit].[item ref].[serial number]

Information regarding NTINs cannot be exchanged with trade partners unless the specific format outlined above is followed. If using an NTIN without following this format, an outbound error occurs when passing data from TraceLink to a trade partner.

## Market Release (SOAP)

### Market Release Request

## Guidelines

❗ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

The following data is sent in the request to TraceLink:

| Data Element      |  |                      |  | Occurs Length | Type   | Description                                                                                                                                                                                                       |
|-------------------|--|----------------------|--|---------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

      <TLResponse>
        <Success>true</Success>
      </TLResponse>
    </ns2:MarketReleaseResponse>
  </S:Body>
</S:Envelope>

```

# Decommissioning and destruction

# Decommission and destruction APIs

## Why do I use these messages?

Use the following messages to indicate that items or serial numbers are withdrawn from the supply chain as a result of decommissioning or destruction.

Decommissioning a serial number indicates that it has been withdrawn from the supply chain, but it can be reused again later (e.g. the serial number is decommissioned because it was commissioned with incorrect information). Destroying a serial number indicates that it is permanently withdrawn from the supply chain (e.g. the item that the serial number represents was physically destroyed).

## Which report do these messages generate?

These messages generate one of the following reports in the Russia Compliance application if their contents meet the report conditions:

- [552 - Withdrawal](#) – Captures information about serialized items that are removed from supply chain circulation as the result of a quality sample, decommissioning, or destruction in a warehouse.
- [542 - Destruction](#) – Captures information about serialized items that are disposed of in a destruction facility (i.e. the items are decommissioned or destroyed in TraceLink).

 TraceLink disaggregates the decommissioned or destroyed product if the serial numbers are aggregated to parent containers, which prompts a disaggregation event and initiates the [913 - Unit Extract](#) report.

## ESM Decommission (EPCIS v1.2)

### Guidelines

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

**Message Type:** SOM\_ESM\_DECOMMISSION

**Info Exchange Display Name:** ESM Decommission

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

⚠ NTINs *must* follow the [GS1 Guidance](#) standards as found on the GS1 website.

- Ex: urn:epc:id:sgtin:415001647778.0.100000000022
- Format: urn:epc:id:sgtin:[company prefix].[indicator digit].[item ref].[serial number]

Information regarding NTINs cannot be exchanged with trade partners unless the specific format outlined above is followed. If using an NTIN without following this format, an outbound error occurs when passing data from TraceLink to a trade partner.

# Decommission Event (EPCIS v1.2)

## Guidelines

CMOs and 3PLs use this message to decommission serial numbers on behalf of the product's MAH who owns Serialized Operations Manager. The event data uses the GS1 EPCIS format with extensions in the TraceLink namespace for additional decommission data elements that provide business and regulatory information.

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

**Message Type:** SOM\_DECOMMISSION\_EVENT

**Info Exchange Display Name:** Decommission Event

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

ⓘ NTINs *must* follow the [GS1 Guidance](#) standards as found on the GS1 website.

- Ex: urn:epc:id:sgtin:415001647778.0.1000000000022
- Format: urn:epc:id:sgtin:[company prefix].[indicator digit].[item ref].[serial number]

Information regarding NTINs cannot be exchanged with trade partners unless the specific format outlined above is followed. If using an NTIN without following this format, an outbound error occurs when passing data from TraceLink to a trade partner.

| Data Element        | Occurs Length | Type | Description                                  |
|---------------------|---------------|------|----------------------------------------------|
| epcis:EPCISDocument | 1...1<br>-    | -    | <b>Required.</b> EPCIS message root element. |

## Errors

| Exception Code                  | Exception Message                                                                                                                                                                                                                                                                              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BADAGGREGATESTATE               | Operation could not be performed because serial number <serial number> and serial number <parent serial number> are currently in different states, or the operation would result in them having different states. Parent and child serial numbers are not permitted to be in different states. |
| CANNOTBEAGGREGATED              | Operation could not be performed because serial number <serial number> is aggregated to container <parent serial number>.                                                                                                                                                                      |
| CROSSLOCATIONS                  | Operation cannot be performed against serial numbers in multiple locations.                                                                                                                                                                                                                    |
| EVENTTIMEAFTERNOW               | Event time stamp must not be in the future.                                                                                                                                                                                                                                                    |
| EVENTTIMEBEFORELASTEVENT        | Event time stamp is earlier than the last event for serial number <serial number>.                                                                                                                                                                                                             |
| MLTUPLE_ATTRIBUTES_DECOMMISSION | The serial number(s) could not be decommissioned. The Decommission API request may only specify a single reason code.                                                                                                                                                                          |

| Exception Code          | Exception Message                                                                                          |
|-------------------------|------------------------------------------------------------------------------------------------------------|
| NEVERCOMMISSIONED       | Serial number <serial number> was never commissioned.                                                      |
| NOSOMSERVICE            | No Serialized Operations Manager service found.                                                            |
| NOTCOMMISSIONED         | Serial number <serial number> is not commissioned.                                                         |
| NOTCOMMISSIONEDLOCATION | Serial Number <serial number> was not commissioned at this location.                                       |
| NOTVALIDLOCATION        | Location <location identifier> was not valid for serial number <serial number>.                            |
| SNNOTFOUND              | Serial number <serial number> does not exist.                                                              |
| SOMDUPLICATESNS         | The following serial numbers were listed more than once: <serial number>.                                  |
| VALIDATION              | Destruction Method is required for products sold in Russia.                                                |
|                         | Item Attribute is required for products sold in Russia.                                                    |
|                         | Location is required for products sold in Russia.                                                          |
|                         | Reporting Party is required when Transactions are included in the request and products are sold in Russia. |
|                         | The parameter <field name> is missing or had an invalid value.                                             |
|                         | Transaction Identifier for 'Removal from Circulation' is required for products sold in Russia.             |

## Decommission Response

### Guidelines

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

The following fields are included in the message response:

| Data Element | Occurs Length | Type | Description                                  |
|--------------|---------------|------|----------------------------------------------|
| S:Envelope   | 1...1         | -    | <b>Required.</b> SOAP Envelope root element. |

| Data Element |        |                          |            |                 |                  | Occurs Length | Type      | Description                                                                                                    |
|--------------|--------|--------------------------|------------|-----------------|------------------|---------------|-----------|----------------------------------------------------------------------------------------------------------------|
|              | S:Body |                          |            |                 |                  | 1..1<br>-     | -         | <b>Required.</b> SOAP Message Body.                                                                            |
|              |        | ns2:DecommissionResponse |            |                 |                  | 1..1<br>-     | -         | <b>Required.</b> Decommission response message.                                                                |
|              |        |                          | TLResponse |                 |                  | 0..1<br>-     | -         | <b>Required.</b> TraceLink response message.                                                                   |
|              |        |                          |            | Success         |                  |               | 0..1<br>- | <b>Required.</b> Indicates if the decommission request successfully processed. <sup>1</sup>                    |
|              |        |                          |            | ExceptionReturn |                  |               | 0..1<br>- | <b>Conditionally required</b> if <b>Success</b> = <b>false</b> ; omitted otherwise. Error information.         |
|              |        |                          |            | CallException   |                  |               | 1..*<br>- | <b>Required.</b> Error details including the exception code and error message, if available.                   |
|              |        |                          |            |                 | ExceptionCode    | 0..1<br>0/*   | String    | <b>Required.</b> Error code.                                                                                   |
|              |        |                          |            |                 | ExceptionMessage | 0..1<br>0/*   | String    | <b>Conditionally required</b> if error condition is available. Message that further describes error condition. |

## Example

```

<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:DecommissionResponse xmlns:ns2="urn:tracelink:soap" xmlns:ns3="http://tracelink.com/som">
      <TLResponse>
        <Success>true</Success>
      </TLResponse>
    </ns2:AggregateResponse>
  </S:Body>
</S:Envelope>

```

<sup>1</sup>true

# ESM Destroy (EPCIS v1.2)

## Guidelines

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

**Message Type:** SOM\_ESM\_DESTROY

**Info Exchange Display Name:** ESM Destroy

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

⚠ NTINs *must* follow the [GS1 Guidance](#) standards as found on the GS1 website.

- Ex: urn:epc:id:sgtin:415001647778.0.100000000022
- Format: urn:epc:id:sgtin:[company prefix].[indicator digit][item ref].[serial number]

Information regarding NTINs cannot be exchanged with trade partners unless the specific format outlined above is followed. If using an NTIN without following this format, an outbound error occurs when passing data from TraceLink to a trade partner.

| Data Element        |  | Occurs Length | Type     | Description                                                                                                                                  |

# Destroy Event (EPCIS v1.2)

## Guidelines

CMOs and 3PLs use this message to decommission serial numbers on behalf of the product's MAH who owns Serialized Operations Manager. The event data uses the GS1 EPCIS format with extensions in the TraceLink namespace for additional decommission data elements that provide business and regulatory information.

This message uses the Park and Retry functionality. If a prerequisite condition for this message has not been met, TraceLink stops processing the task, returns the task to the queue, and then tries to process the task again every 15 minutes for up to 2 hours.

**Message Type:**snd SOM\_DESTROY\_EVENT

**Info Exchange Display Name:** Destroy Event

ⓘ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

ⓘ NTINs *must* follow the [GS1 Guidance](#) standards as found on the GS1 website.

- Ex: urn:epc:id:sgtin:415001647778.0.1000000000022
- Format: urn:epc:id:sgtin:[company prefix].[indicator digit][item ref].[serial number]

Information regarding NTINs cannot be exchanged with trade partners unless the specific format outlined above is followed. If using an NTIN without following this format, an outbound error occurs when passing data from TraceLink to a trade partner.

| Data Element        | Occurs Length | Type | Description                                                                                |
|---------------------|---------------|------|--------------------------------------------------------------------------------------------|
| epcis:EPCISDocument | 1...1<br>-    | -    | <b>Required.</b> The <b>EPCISDocument</b> element contains the EPCIS message root element. |

## Destroy (SOAP)

### Destroy Request

#### Guidelines

❗ When sending an element in Date or DateTime format, a valid date must be given. "00" is not a valid day or month value and "0000" is not a valid year value.

The following data is sent in the request to TraceLink:

| Data Element     | Occurs Length | Type | Description                                  |
|------------------|---------------|------|----------------------------------------------|
| soapenv:Envelope | 1...1<br>-    | -    | <b>Required.</b> SOAP Envelope root element. |
| soapenv:Header   | 1...1         | -    | Not used by TraceLink.                       |

| Data Element |              |                |                        | Occurs Length | Type    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Errors

| Exception Code     | Exception Message                                                                                                                                                                                                                                                                              |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BADAGGREGATESTATE  | Operation could not be performed because serial number <serial number> and serial number <parent serial number> are currently in different states, or the operation would result in them having different states. Parent and child serial numbers are not permitted to be in different states. |
| CANNOTBEAGGREGATED | Operation could not be performed because serial number <serial number> is aggregated to container <parent serial number>.                                                                                                                                                                      |
| CROSSLOCATIONS     | Operation cannot be performed against serial numbers in multiple locations.                                                                                                                                                                                                                    |

| Exception Code                  | Exception Message                                                                                                     |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| EVENTTIMEAFTERNOW               | Event time stamp must not be in the future.                                                                           |
| EVENTTIMEBEFORELASTEVENT        | Event time stamp is earlier than the last event for serial number <serial number>.                                    |
| MLTUPLE_ATTRIBUTES_DECOMMISSION | The serial number(s) could not be decommissioned. The Decommission API request may only specify a single reason code. |
| NEVERCOMMISSIONED               | Serial number <serial number> was never commissioned.                                                                 |
| NOSOMSERVICE                    | No Serialized Operations Manager service found.                                                                       |
| NOTCOMMISSIONED                 | Serial number <serial number> is not commissioned.                                                                    |
| NOTCOMMISSIONEDLOCATION         | Serial Number <serial number> was not commissioned at this location.                                                  |
| NOTVALIDLOCATION                | Location <location identifier> was not valid for serial number <serial number>.                                       |
| SNNOTFOUND                      | Serial number <serial number> does not exist.                                                                         |
| SOMDUPLICATESNS                 | The following serial numbers were listed more than once: <serial number>.                                             |
| VALIDATION                      | Destruction Method is required for products sold in Russia.                                                           |
|                                 | Item Attribute is required for products sold in Russia.                                                               |
|                                 | Location is required for products sold in Russia.                                                                     |
|                                 | Reporting Party is required when Transactions are included in the request and products are sold in Russia.            |
|                                 | The parameter <field name> is missing or had an invalid value.                                                        |
|                                 | Transaction Identifier for 'Removal from Circulation' is required for products sold in Russia.                        |

## Destroy Response

### Guidelines

The following data is included in the message response:

| Data Element        |  |  |  |  |  |  | Occurs Length | Type   | Description                                                                                                           |
|---------------------|--|--|--|--|--|--|---------------|--------|-----------------------------------------------------------------------------------------------------------------------|
| S:Envelope          |  |  |  |  |  |  | 1...1<br>-    | -      | <b>Required.</b> SOAP Envelope root element.                                                                          |
| S:Body              |  |  |  |  |  |  | 1...1<br>-    | -      | <b>Required.</b> SOAP Message Body.                                                                                   |
| ns2:DestroyResponse |  |  |  |  |  |  | 1...1<br>-    | -      | <b>Required.</b> Destroy response message.                                                                            |
| TLResponse          |  |  |  |  |  |  | 0...1<br>-    | -      | <b>Required.</b> TraceLink response.                                                                                  |
| Success             |  |  |  |  |  |  | 0...1<br>-    | -      | <b>Required.</b> Indicates if Destroy request processed successfully. <sup>1</sup>                                    |
| ExceptionReturn     |  |  |  |  |  |  | 0...1<br>-    | -      | <b>Conditionally required</b> if <b>Success</b> = <code>false</code> , otherwise omitted. Contains error information. |
| CallException       |  |  |  |  |  |  | 1...<br>*     | -      | <b>Required.</b> Error details including exception code and error message, if available.                              |
| ExceptionCode       |  |  |  |  |  |  | 0...1<br>0/*  | String | <b>Required.</b> Error code.                                                                                          |
| ExceptionMessage    |  |  |  |  |  |  | 0...1<br>0/*  | String | <b>Conditionally required</b> if exception message exists. Message that further describes error condition.            |

## Example

```
<S:Envelope xmlns:S="http://schemas.xmlsoap.org/soap/envelope/">
  <S:Body>
    <ns2:DestroyResponse xmlns:ns2="urn:tracelink:soap" xmlns:ns3="http://tracelink.com/som">
      <TLResponse>
        <Success>true</Success>
      </TLResponse>
    </ns2:DestroyResponse>
  </S:Body>
</S:Envelope>
```

# Enumerations

# Aggregation

## AggregationInspection

Choose from one of the following enumerators:

| Data Code  | Description                                                                                                                                                                                                            |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| VERIFIED   | The aggregation hierarchy of the delivery was scanned down to the each level.                                                                                                                                          |
| UNVERIFIED | Only the top-level (e.g. pallet) aggregation hierarchy of the delivery was scanned, and the remaining aggregation levels are unknown to TraceLink.                                                                     |
| IMPLIED    | The entire aggregation hierarchy for the delivery is known to TraceLink, but only the top level (e.g. pallet) was scanned. The lower aggregation levels were provided previously (e.g. in an aggregation or shipment). |

## DeliveryInspection

Choose from one of the following enumerators:

| Data Code    | Description                                                                                |
|--------------|--------------------------------------------------------------------------------------------|
| NOTINSPECTED | The contents of the delivery were not inspected.                                           |
| PASSED       | The contents of the delivery were inspected and match the associated documentation.        |
| FAILED       | The contents of the delivery were inspected and do not match the associated documentation. |

## PackagingLevel

Choose from one of the enumerators below:

The following values are only applicable for elements in the EPCIS Header Vocabulary Product Master Data group:

| Data Code | Description          |
|-----------|----------------------|
| BE        | Innerpack or bundle. |
| CS        | Case or shipper.     |
| PX        | Pallet               |
| UN        | Saleable item unit.  |

The following values are only applicable for the elements using the TraceLink namespace (i.e. "tl:");

| Data Code | Description          |
|-----------|----------------------|
| CA        | Case or shipper.     |
| EA        | Saleable item unit.  |
| PK        | Innerpack or bundle. |
| PL        | Pallet               |

## PackedStatus

Choose from one of the enumerators below:

| Data Code     | Description                     | Encoding Description        |
|---------------|---------------------------------|-----------------------------|
| FULL          | Full, homogeneous container.    | packed-status-FULL          |
| MIXED         | Full, mixed container.          | packed-status-MIXED         |
| PARTIAL       | Partial, homogeneous container. | packed-status-PARTIAL       |
| PARTIAL_MIXED | Partial, mixed container.       | packed-status-PARTIAL_MIXED |

# PackLevel

Choose from one of the enumerators below:

| Data Code | Description      |
|-----------|------------------|
| CA        | Case/Shipper     |
| EA        | Each             |
| PK        | Innerpack/Bundle |
| PL        | Pallet           |

# Company and location identifiers

## BusinessAndLocationId

Choose from one of the enumerators below:

| Data Code      | Description                                                                                                                                                                                                                                                   |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AM_TIN         | Armenia Taxpayer Identification Number.                                                                                                                                                                                                                       |
| BR_PROF_REG    | Brazil Professional Registration Number.                                                                                                                                                                                                                      |
| BY_TIN         | Belarus Taxpayer Identification Number.                                                                                                                                                                                                                       |
| BR_CNES        | Brazil National Registry of Health Facilities Number.                                                                                                                                                                                                         |
| CN_FOREIGN_MAH | China Foreign MAH ID.                                                                                                                                                                                                                                         |
| CN_FOREIGN_MFR | China Foreign Manufacturer ID.                                                                                                                                                                                                                                |
| BR_CNPJ        | Brazil Tax ID.                                                                                                                                                                                                                                                |
| CN_USCID       | China Unified Social Credit Identifier.                                                                                                                                                                                                                       |
| COMPANYID      | Company Id in Internal ERP System.                                                                                                                                                                                                                            |
| COMPANYSITEID  | Internal Location or Site Id in Internal ERP System.                                                                                                                                                                                                          |

## CirculationReasonCode

Choose from the following enumerators:

| Data Code              | Description                                                                                                                    |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| COUNTERFEIT            | The product is a fraudulent imitation of the original.                                                                         |
| DAMAGED                | The product is damaged.                                                                                                        |
| EXCLUDED               | The product is not registered.                                                                                                 |
| EXPIRED                | The product is expired.                                                                                                        |
| FALSIFIED              | The document for the product is intentionally inaccurate.                                                                      |
| LOSTCONSUMERPROPERTIES | The product has lost its potency (e.g. due to exposure to light or being stored outside of the appropriate temperature range). |
| RECALLED               | The product is recalled.                                                                                                       |
| SUBSTANDARD            | The product does not meet physical or quality standards.                                                                       |
| UNFITFORCONSUMPTION    | The product cannot be safely consumed.                                                                                         |
| WITHDRAWN              | The Manufacturer or MAH has withdrawn the product from the market.                                                             |

| Data Code  | Description                                       |
|------------|---------------------------------------------------|
| CN-RESCODE | China item number format.                         |
| GTIN-14    | GTIN-14 product code type.                        |
| NTIN       | National Trade Item Identifier product code type. |

# PackagingItemCodeType

Choose from one of the enumerators below:

| Data Code  | Description                      |
|------------|----------------------------------|
| CN_RESCODE | China RES Code.                  |
| GTIN_14    | GTIN-14.                         |
| NTIN       | National Trade Item Number.      |
| SSCC       | SSCC - GS1 Company Prefix Value. |

# Serial numbers

## Encoding

Choose from one of the enumerators below:

| Data Code     | Description                                                                                                                                                                                          |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AI(00)        | The bar code representation of an SSCC-18 number and the equivalent of the SSCC-96 scheme.                                                                                                           |
| AI(01)+AI(21) | The bar code representation of a serialized GTIN number and the equivalent of the SGTIN-96 scheme.                                                                                                   |
| AI(8003)      | Not currently used. The bar code equivalent of the GRAI schemes.                                                                                                                                     |
| CN-EDMC       | China number encoding format.                                                                                                                                                                        |
| GRAI-96       | Not currently used. A 96-bit encoding scheme for Global Returnable Asset Identifier.                                                                                                                 |
| GRAI-170      | Not currently used. A 170-bit encoding scheme for Global Returnable Asset Identifier.                                                                                                                |
| SGTIN-96      | Not currently used. A 96-bit encoding scheme for embedding EAN.UCC 685 System standard GTINs (Global Trade Identification Numbers) and EPCs (Electronic Product Codes) on 2D barcodes and RFID tags. |
| SGTIN-198     | Not currently used. A 198-bit encoding scheme for embedding EAN.UCC 685 System standard GTINs (Global Trade Identification Numbers) and EPCs (Electronic Product Codes) on barcodes and RFID tags.   |
| SSCC-96       | Not currently used. A 96-bit encoding scheme for embedding of EAN.UCC 897 System standard SSCCs (Serialized Shipping Container Codes) on 2D barcodes and RFID tags.                                  |

## EPC Pure Identifier Format Examples

The following examples are in EPC Pure Identity URI format:

**CN EDMC:** `http://epcis.tracelink.com/hc/cn-edmc/obj/[serial number]`

E.g. `http://epcis.tracelink.com/hc/cn-edmc/obj/88102301100002005943`

**NTIN:** `urn:epc:id:sgtin:[company prefix].[indicator digit][item ref].[serial number]`

E.g. `urn:epc:id:sgtin:415001647778.0.100000000022`

**SGTIN:** urn:epc:id:sgtin:[company prefix].[indicator digit + item reference].[serial number]

E.g. urn:epc:id:sgtin:068202.0401034.11220207026272

**SSCC:** urn:epc:id:sscc:[company prefix].[extension digit + serial number]

E.g. urn:epc:id:sscc:030944.10105363280

## FilterValue

Choose from one of the enumerators below:

| Data Code | Encoding Description | Description                                                                                                                                                                                                                                                                                |
|-----------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0         | filter-value-0       | Filter value associated with SGTIN or SSCC. This element is used in conjunction with the Application Identifier number, SGTIN, or SSCC number in the event the serial number needs to be translated into an alternate format for the customer system (e.g. GS1 HEX or GS1 Tag URI format). |
| 1         | filter-value-1       |                                                                                                                                                                                                                                                                                            |
| 2         | filter-value-2       |                                                                                                                                                                                                                                                                                            |
| 3         | filter-value-3       |                                                                                                                                                                                                                                                                                            |
| 4         | filter-value-4       |                                                                                                                                                                                                                                                                                            |
| 5         | filter-value-5       |                                                                                                                                                                                                                                                                                            |
| 6         | filter-value-6       |                                                                                                                                                                                                                                                                                            |
| 7         | filter-value-7       |                                                                                                                                                                                                                                                                                            |

## Format

Choose from one of the enumerators below:

| Data Code     | Description                                                                                         |
|---------------|-----------------------------------------------------------------------------------------------------|
| AI(00)        | The bar code representation of an SSCC-18 number, and the equivalent of the SSCC-96 scheme.         |
| AI(01)+AI(21) | The bar code representation of a serialized GTIN number, and the equivalent of the SGTIN-96 scheme. |

| Data Code | Description                                                                                                                                                                      |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AI(8003)  | The bar code equivalent of the GRAI schemes.                                                                                                                                     |
| CN-EDMC   | China number encoding format.                                                                                                                                                    |
| GRAI-96   | A 96-bit encoding scheme for Global Returnable Asset Identifier.                                                                                                                 |
| GRAI-170  | A 170-bit encoding scheme for Global Returnable Asset Identifier.                                                                                                                |
| SGTIN-96  | A 96-bit encoding scheme for embedding EAN.UCC 685 System standard GTINs (Global Trade Identification Numbers) and EPCs (Electronic Product Codes) on 2D barcodes and RFID tags. |
| SGTIN-198 | A 198-bit encoding scheme for embedding EAN.UCC 685 System standard GTINs (Global Trade Identification Numbers) and EPCs (Electronic Product Codes) on bar codes and RFID tags.  |
| SSCC-96   | A 96-bit encoding scheme for embedding EAN.UCC 897 System standard SSCCs (Serialized Shipping Container Codes) on 2D barcodes and RFID tags.                                     |

## Encoding

Choose from one of the enumerators below:

| Data Code     | Description                                                                                                                                                                                          |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AI(00)        | The bar code representation of an SSCC-18 number and the equivalent of the SSCC-96 scheme.                                                                                                           |
| AI(01)+AI(21) | The bar code representation of a serialized GTIN number and the equivalent of the SGTIN-96 scheme.                                                                                                   |
| AI(8003)      | Not currently used. The bar code equivalent of the GRAI schemes.                                                                                                                                     |
| CN-EDMC       | China number encoding format.                                                                                                                                                                        |
| GRAI-96       | Not currently used. A 96-bit encoding scheme for Global Returnable Asset Identifier.                                                                                                                 |
| GRAI-170      | Not currently used. A 170-bit encoding scheme for Global Returnable Asset Identifier.                                                                                                                |
| SGTIN-96      | Not currently used. A 96-bit encoding scheme for embedding EAN.UCC 685 System standard GTINs (Global Trade Identification Numbers) and EPCs (Electronic Product Codes) on 2D barcodes and RFID tags. |
| SGTIN-198     | Not currently used. A 198-bit encoding scheme for embedding EAN.UCC 685 System standard GTINs (Global Trade Identification Numbers) and EPCs (Electronic Product Codes) on barcodes and RFID tags.   |
| SSCC-96       | Not currently used. A 96-bit encoding scheme for embedding of EAN.UCC 897 System standard SSCCs (Serialized Shipping Container Codes) on 2D barcodes and RFID tags.                                  |

# Shipment and receipt

## ActionCode

Choose from one of the enumerators below:

| Data Code      | Description                                                                                          |
|----------------|------------------------------------------------------------------------------------------------------|
| CUSTOMSTRANSIT | The product is being transported through the importing to country but will not be distributed there. |
| DESTRUCTION    | The shipment is designated for destruction.                                                          |
| DOMESTIC       | The shipment is granted clearance to be sold and consumed domestically.                              |
| EXPORT         | This shipment contains domestic or local products and is sent to another country.                    |
| REFUSAL        | The shipment is refused clearance by the regulatory customs authority.                               |
| REEXPORT       | The shipment contains products already imported into the country and is sent to another country.     |

## ContractType

Choose from one of the enumerators below:

| Data Code                | Description                                                                            |
|--------------------------|----------------------------------------------------------------------------------------|
| AgencySalesAgreement     | An agent performs both legal actions and paid services for a manufacturer or supplier. |
| CommissionSalesAgreement | A sales agent earns commission for facilitating trade for an exporting company.        |
| CompetitiveBid           | Sold under private contract.                                                           |
| ConsignmentAgreement     | The buyer pays the manufacturer or supplier only when the product is sold.             |
| GovernmentContract       | Product is sold under a government state contract.                                     |
| PrivateContract          | Sold under competitive bid contract.                                                   |

## FundingSource

Choose from one of the enumerators below:

| Data Code           | Description                                                 |
|---------------------|-------------------------------------------------------------|
| FederalBudgetFunds  | Federal government funds are used to purchase the shipment. |

| WITHDRAWN              | Product that has been withdrawn from the supply chain.                                                |

## DecommissionReasonCode

Choose from one of the enumerators below:

| Data Code | Description                                                               |
|-----------|---------------------------------------------------------------------------|
| DAMAGED   | Product that has been damaged.                                            |
| DEFECTIVE | The product does not function as intended.                                |
| DISPENSED | Product that has been dispensed.                                          |
| DISPOSED  | Product that has been disposed of and thus removed from the supply chain. |

| Data Code                  | Description                                                                                                     |
|----------------------------|-----------------------------------------------------------------------------------------------------------------|
| EXPIRED                    | Product's expiration date has passed.                                                                           |
| EXPIRY                     | Product that contains a passed expiration date.                                                                 |
| INAPPROPRIATELY_STORED     | The product has been stored improperly and is no longer fit for sale.                                           |
| MISPLACED                  | Product that has been misplaced or lost and thus removed from the supply chain.                                 |
| OTHER                      | Other reason for the product being decommissioned.                                                              |
| QUALITY_RELEASED           | Product that has been released by quality assurance.                                                            |
| RECALL                     | Product that has been recalled.                                                                                 |
| REPACKAGED                 | Product that has been repackaged.                                                                               |
| RETURNED                   | The product has been returned and cannot be resold.                                                             |
| SAMPLED                    | Product that has been sampled (not by regulatory authorities) and thus removed from the supply chain.           |
| SAMPLED_ARCHIVAL           | The product is sampled to store as a record.                                                                    |
| SAMPLED_BY_AUTHORITIES     | Product that was sampled by regulatory authorities and thus removed from the supply chain.                      |
| SAMPLED_CLINICAL_STUDY     | The product is sampled for a clinical study.                                                                    |
| SAMPLED_CUSTOMS_CONTROL    | The product is sampled for inspection control by customs authorities.                                           |
| SAMPLED_FEDERAL_INSPECTION | The product is sampled for federal inspection.                                                                  |
| SAMPLED_MARKETING_DEMO     | The product is used in a marketing demonstration.                                                               |
| SAMPLED_PHARMA_STUDY       | The product is sampled for a post-registration pharmaceutical study, to support submitted changes to a dossier. |
| SAMPLED_SELECTIVE_CONTROL  | The product is sampled by health authorities as needed to ensure quality standards.                             |
| SPOILAGE                   | The product is spoiled due to exposure (e.g. heat, oxygen, moisture, microorganisms).                           |
| STOLEN                     | Product that has been reported as stolen.                                                                       |
| WITHDRAWN                  | Product that has been withdrawn from the supply chain.                                                          |
| WITHDRAWN_EXPERIMENT       | The product is withdrawn from the market during the course of an experiment.                                    |
